IMPORTANT SAFETY RECALL NOTICE

Calderwell CV-7 Electric Panel Van — Braking Software Update

Recall reference	Calderwell CV-7 / R-2025-118
Affected vehicles	CV-7 built 1 March 2024 – 26 September 2025 (BCM software 4.2.x)
Action required	Free software update to your vehicle's braking control module
Time required	Over-the-air (no visit needed) or approx. 35 minutes at a workshop

Dear Customer

Calderwell Mobility Limited is carrying out a voluntary safety recall affecting your Calderwell CV-7 electric panel van. We are writing to tell you what the issue is, what we are doing about it, and what you need to do. Your safety is our first priority and we are sorry for the inconvenience.

What is the issue?

The CV-7 blends its regenerative (motor) braking with its normal friction brakes using a software module. In a specific combination of conditions — a wet or slippery road combined with a sudden, hard press of the brake pedal — the software can briefly reduce the total braking force for a fraction of a second before the friction brakes take full effect. This can increase your stopping distance in those conditions.

Your normal friction brakes and the anti-lock braking system (ABS) always remain available. The vehicle does not lose steering and does not lose braking altogether.

What are we doing?

We have developed a software update (build 4.3.0) that corrects the issue. The update is free of charge. We are deploying it in two ways:

1. Over-the-air: if your vehicle is connected, the update can be sent directly to the vehicle. You will receive a separate message when it is ready, and a prompt on the vehicle's display to confirm installation while the vehicle is safely parked.
2. At a workshop: if your vehicle cannot receive the update over-the-air, please book it in with your Calderwell service partner. The update takes about 35 minutes.

What should you do now?

3. Continue to drive your vehicle, but please take extra care when braking on wet or slippery surfaces, and leave additional stopping distance, until the update has been installed.
4. Watch for our over-the-air notification, or contact your account manager or the recall helpline below to arrange a workshop appointment.
5. Confirm installation as soon as the update is offered to your vehicle.

Fleet operators

If you operate a fleet of affected vehicles, your Calderwell account manager will contact you directly to agree a deployment schedule that minimises vehicle downtime, prioritising over-

the-air updates and arranging workshop slots for the remainder. Please cascade the safety guidance above to your drivers in the meantime.

Questions?

Recall helpline: 0800 555 0 7 7 7 (Mon–Fri 8am–6pm). Email: recall@calderwellmobility.com. Please quote recall reference R-2025-118 and your vehicle registration or VIN.

Yours faithfully

_____
