23 October 2025 DVSA ref: R/2025/118

Dear Sirs

Calderwell CV-7 — safety-related defect (regenerative braking control) — recall reference R/2025/118

Thank you for your client's notification dated 17 October 2025 of a safety-related defect affecting the Calderwell CV-7 electric panel van, and for the accompanying recall action plan.

The Vehicle Safety Branch acknowledges the notification and has allocated recall reference R/2025/118, which should be quoted on all future correspondence and on customer communications. We are content that the matter is being handled as a manufacturer-led voluntary safety recall under the Code of Practice.

We have reviewed the action plan and ask that your client address the following points in a revised plan:

Completion target. We expect manufacturers to aim for the highest practicable completion rate. A 12-month target of 85% is below our usual expectation; please commit to a target of at least 90% at 12 months, with continued effort thereafter, and set out the escalation steps for non-responding keepers.

Phase 1 timing. Please bring forward the issue of immediate safety guidance to affected fleet operators so that it is completed within 10 days of launch rather than 14.

Deployment sequencing. Please confirm that over-the-air deployment will be prioritised to connected vehicles to reduce fleet risk most quickly, with workshop bookings arranged in parallel for the remainder.

VIN schedule and reporting. Please provide the full VIN schedule and confirm that interim completion figures will be reported to the Branch at 3, 6 and 12 months.

Subject to the above, the Branch is content for the recall to proceed. Please provide the revised action plan within 14 days. We will publish the recall on the GB vehicle recalls database in due course.

Yours faithfully

K. Whitlow
HM Inspector, Vehicle Safety Branch, DVSA
