INTELLECTUAL PROPERTY DUE DILIGENCE REPORT

Project Indigo — CarbonLedger patent portfolio and freedom-to-operate review

Prepared for: Caspian Technologies Limited and Whitfield Carter LLP | Date: 28 January 2026 (updated 9 March 2026) | Ref: HIP/CSP/2026/014

1. SCOPE AND PURPOSE

This report reviews the patent portfolio proposed to be licensed to Aerelon Aviation Group plc in the commercial-aviation field (nine patent families, CL-PAT-001 to CL-PAT-009), confirms ownership and status, and provides a freedom-to-operate (FTO) assessment in respect of the modules to be deployed. It is addressed to Caspian and to its solicitors and may be relied on by them for the purposes of the Transaction.

2. PORTFOLIO OVERVIEW

Family	Status	Territories	Comment
CL-PAT-001	Granted	GB, EP, US	Core ledgering patent; renewals current.
CL-PAT-002	Granted	GB, EP, US, JP	Cryptographic attestation; no issues.
CL-PAT-003	Granted	GB, EP, US	ML fuel-burn estimation; central to aviation use.
CL-PAT-004	Granted	GB, EP	Co-inventor assignment to be confirmed (see §3).
CL-PAT-005	Granted	GB, EP, US	No issues.
CL-PAT-006	Granted	GB, EP, US, CA	Allocation to transport legs; relevant to Field.
CL-PAT-007	Granted	GB, EP	No issues.
CL-PAT-008	EP pending	GB(gr), EP, US	Third-party observation filed; see §4.
CL-PAT-009	US pending	GB, EP, US, JP	US continuation; OA responded 19 Jan 2026.

3. OWNERSHIP — CL-PAT-004

Family CL-PAT-004 was filed jointly in the names of Caspian Technologies Limited and Dr Theo Eriksson. A confirmatory assignment from Dr Eriksson to Caspian (dated 3 March 2021) is on file but has not been recorded at the UKIPO or EPO. We recommend that recordal be completed and that a fresh confirmatory deed of assignment be executed at completion to place title beyond doubt before the licence is granted. Subject to that step, Caspian holds clean title to the family.

4. THIRD-PARTY OBSERVATION — CL-PAT-008

A third-party observation was filed against the EP designation of CL-PAT-008 on 11 September 2025, citing two prior-art references. In our opinion the cited art does not anticipate or render obvious the independent claims as amended, and we do not consider that the observation will prevent grant. The GB designation is already granted.

5. FREEDOM TO OPERATE

We searched for third-party rights relevant to the SAF-accounting and carbon-intensity routing modules. The principal result is US 11,204,883 (Meridian Atmospherics Inc), directed to a method of allocating aviation fuel emissions. On our construction, the Platform as configured falls outside the independent claims because it does not perform the claimed real-time satellite-telemetry correction step. A straightforward design-around is in any event available. We assess the residual FTO risk in the Field as low.

6. CONCLUSION AND RECOMMENDATIONS

The portfolio is well-maintained and substantially clean. We recommend: (i) executing a confirmatory deed of assignment for CL-PAT-004 and recording it; (ii) obtaining a deed of release from Ravensworth Ventures LLP in respect of the Licensed Patents; (iii) monitoring the EP prosecution of CL-PAT-008 and the US prosecution of CL-PAT-009; and (iv) disclosing US 11,204,883 against the non-infringement warranty. Subject to those matters, we are content that Caspian may grant the licence as proposed.
