Legal Due Diligence Report

Target: Larkmoor Bioscience Limited (company no. 13042288)

Prepared for: Ravensworth Ventures LLP (as Lead Investor) and Aldridge Seed LP

Prepared by: Hargrove & Associates LLP, investor counsel

Date: 24 April 2026 · Status: Final · Strictly private and confidential — legally privileged

1. Scope and basis of this report

This report has been prepared by Hargrove & Associates LLP for Ravensworth Ventures LLP and Aldridge Seed LP in connection with the proposed Series A subscription of £10,000,000 for 1,000,000 Series A Preferred Shares in Larkmoor Bioscience Limited (the "Company"), representing 25% of the fully diluted post-money share capital, at a pre-money valuation of £30,000,000. It is based on our review of the documents made available in the project data room between 16 January and 30 April 2026, the Company's replies to our enquiries, and public searches at Companies House and the Intellectual Property Office.

This report is qualified in its entirety by the matters set out in the Disclosure Letter. It is addressed to the Investors only and may not be relied upon by any other person. References to materiality are to matters we consider material in the context of the proposed investment.

2. Executive summary and key findings

The Company is a precision-fermentation business developing recombinant proteins and cell-based materials. Our review did not identify any matter that, in our view, should prevent the Investors from proceeding, subject to the points summarised below being addressed in the transaction documents or by way of disclosure.

Red-flag points: (i) one former contractor's IP assignment remains unexecuted (folder 6.3); (ii) a supplier statutory demand for £42,300 is outstanding and disputed (folder 7.2); (iii) the lead product requires GB novel-foods authorisation which has not yet been granted; and (iv) the FY2024 SME R&D tax credit claim (£540,000 qualifying spend) remains open with HMRC.

Recommended protections: specific indemnities or warranty/disclosure treatment for the contractor IP point and the disputed supplier demand; a condition or covenant requiring the Company to progress the outstanding IP assignment; and confirmation (obtained) from Innovate UK that the round does not trigger grant claw-back.

3. Corporate and capitalisation

The Company is a private company limited by shares incorporated in England and Wales. The statutory registers are in order and Companies House filings are up to date. The pre-money fully diluted capitalisation comprises 3,000,000 shares (Founders 2,200,000; angel/seed 300,000; option pool 500,000), and the post-money fully diluted capitalisation will comprise 4,000,000 shares, with the Investors holding 1,000,000 (25%). We have reviewed the share register and option grant documentation; 180,000 EMI options have been granted and 320,000 remain available in the pool.

We have reviewed the SAFE and convertible loan note history. All such instruments have either converted or been repaid, and there are no outstanding convertibles or anti-dilution obligations other than those to be created under the Series A documents.

4. Intellectual property

The Company owns or is licensed to use the IP necessary for its business. Patent family LK-PAT-002 (continuous precision-fermentation process) is at PCT national-phase entry in the UK, EU and US; a non-final US office action is outstanding with a response due by 30 June 2026. Two UK trade marks are registered and an EU application is in its opposition period.

We note one former contractor (engaged July–November 2024) has not executed the standard IP assignment. While the Company does not consider the related IP to be material, we recommend a specific covenant requiring the Company to use reasonable endeavours to obtain the assignment, and that the warranty position be confirmed by disclosure.

5. Material contracts, regulatory and disputes

The Company's material supply, collaboration and customer arrangements are on arm's-length terms and we did not identify change-of-control termination rights triggered by the subscription, save as disclosed. The lead product is subject to the GB novel-foods authorisation regime; a pre-application meeting with the Food Standards Agency took place on 4 March 2026 and a full dossier is in preparation. No authorisation has yet been granted, and the commercial timetable assumes authorisation in 2027.

A media-and-reagents supplier has served a statutory demand for £42,300, which the Company disputes on quality grounds. No proceedings have been issued. We recommend this is dealt with by specific disclosure and monitored post-completion.

6. Finance, tax and grants

The audited FY2025 accounts show an operating loss of £3.41m and net cash of £1.92m at 31 December 2025; current monthly burn is approximately £310,000 with runway to August 2026 absent the round. The Company has a £600,000 equipment-finance facility (£415,000 drawn) secured over the pilot-line fermenters. We did not identify any default or acceleration event.

The Company has obtained EIS/SEIS advance assurance and EMI valuation agreement. The FY2024 SME R&D tax credit claim (£540,000 qualifying expenditure) remains open with HMRC; we recommend a tax warranty and disclosure. The Company received a £250,000 Innovate UK grant subject to standard change-of-control claw-back; Innovate UK has confirmed in writing that the round does not trigger claw-back.

7. Employment

Service agreements for the senior team are on market terms. The Head of Bioprocess Engineering tendered and then withdrew a resignation in February 2026 and remains employed; we recommend the Founders confirm there is no current intention to resign among key personnel, and that key-person insurance be put in place as a condition. All pension contributions due have been paid.

8. Conclusion

Subject to the recommended protections being reflected in the subscription agreement, the disclosure letter and the conditions to completion, we consider the Company to be in satisfactory legal order for the purposes of the proposed Series A investment.
